## **DETAILED ACTION**

15. The Examiner acknowledges the response of 11/17/2003, the RCE of 9/4/2003, and the amendment of 9/4/2003.

## Claim Rejections - 35 USC § 103

- 16. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 17. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lim et al. 5,308,691 in view of English et al. 5,837,352 and Doyle et al. 6,541,072.

Lim describes a composite sheet corresponding to the claimed laminate, (see abstract). Lim describes the spunbonded polypropylene fiber sheet with high water vapor penetration which can be used for housewrap, (see abstract). Lim describes the basis weight of the spunbonded polypropylene is about 17-100 g/ square meter which overlaps the amount in the claimed invention, (column 2,

Art Unit: 1771

lines 49-51). Lim describes a spunbond sheet with a meltblown layer, (column 3, lines 34-43), with the desired microporosity and barrier properties corresponding to the claimed breathable film coating of the claimed invention. Lim describes machine direction and cross direction tensile strengths in Table 1, (column 6, lines 15-28). Lim differs from the claimed invention because it describes a meltblown layer and does not state film.

English describes a film/non-woven laminate, (see abstract).

English describes other uses with films being breathable, (column 1, lines 34-35). English describes the laminate to be breathable, (column 3, lines 30-34). English describes film layer may be single or mono layer which corresponds to the claimed monolithic layer of the claimed invention, (column 4, lines 59-67). English describes the film forming polymers are acrylates or polyester, (column 4, lines 66-67; column 5, lines 1-14). English describes the spunbond web can be polypropylene, (column 7, lines 66-67; column 8, lines 1-3).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to employ the breathable mono

Art Unit: 1771

acrylic polymers or polyester of English for the porous meltblown layer of Lim motivated with the expectation that improved water vapor transmission rates would be evidenced as noted by English, (column 4, lines 9-14).

Regarding the amounts of the components of the breathable coating film, one of ordinary skill in this art would be able to optimize these parameters because the references describes the basic chemistry and structure of the claimed laminate, and desires the same performance standards for a protective article which would correspond to housewrap, (column 1, lines 22-25) of Doyle.

18. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bevins et al. 6,497,691 describes breathable barrier layers, see abstract, column 2, lines 12-46.

Branham describes breathable polymer film in an article, (see abstract; column 5, lines 40-65).

19. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John J.

Guarriello whose telephone number is 571-272-1476. The examiner can normally be reached on Monday to Friday from 7:30 am to 4 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris, can be reached on 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Retrieval (PAIR) system. Status information for published applications may be obtained from either Private Pair or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
